

## **Research Assessment #4**

**Date:** October 14th, 2016

**Subject:** Biochemic Cell Salts-A common type of Homeopathic Remedy

**Source:** "Biochemic Phosphates." *Hyland's Homeopathic. Natural Relief*, 01 Aug. 2016. Web. 14 Oct. 2016.

### **Assessment:**

After an interview with a pediatrician and extensive research, I have decided to expand on the purpose and results of biochemic medication which falls under homeopathic remedies. Biochemic cell salts are the most common types of homeopathic medications found in the US and are prescribed by some doctors to some extent. I was aware of the fact that homeopathic treatment has not been popularized in the US and is something that I plan to do with my ISM project. Reading the article "Hyland's Cell salts", really gave me insight on what biochemics are and how they provide strength and stamina rather than just fixing a symptom or a main problem.

Firstly, It was crucial to understand what makes up biochemic cell salts and analyzing what their soul purpose was. Biochemic cell salts are created from minerals that are used to treat every disease. A constant dose is needed for a noticeable effect. Homeopathic medications do not simply treat the problem, they enhance other systems and provide excess energy along with fixing the problem. My main topic for ISM is being able to incorporate the use of integrative medicine with to treat common diseases like seasonal allergies and cold. Biochemics are the only types of homeopathic medications that are available in the US and are somewhat known. This helps my ISM project as it is the main type of

alternative medicine that treats allergies. As mentioned before, these medications are commonly used in Europe and are heavily promoted. The availability of these medications will help gather results for my project.

Although alternative medicine is heard of in the US, it has not been widely practiced due to some malfunctions. In the article "Hyland's Cell salts, it explained the need for alternative medicine and how this is what was used in the olden days. It had shown that the immune system of the people 5-6 decades before had body systems that allowed for a longer and sustainable life than with the generations of today. Through past family experiences, I have learned that alternative medicine has not only helped allowing a healthy immune system, but it has helped bodies in preparing for surgery or incisions. This can be a revolutionary tool for many allopathic treatments and can change the medical field for America. Something that is a key factor in the medical field, is the use of combining prior knowledge with what is being created every second of the day. Using what I knew about biochemics and how 10-12 doses a week can cure major disease, I will find a simple and worthy solution for common problems like seasonal allergies. Alternative medicine requires patience and dedication which the world right now lacks. Everyone person is in a rush to their next life activity and is unable to take simple medications as they interfere with their day to day life. What is different about biochemics medications is that they do not have any symptoms or side effects. I can use this to further enhance my study regarding alternative medicine curing recurring diseases like seasonal allergies and colds. This wealth of knowledge has allowed me to find a way to persuade American consumers and doctors into looking into such medications. In the world of allopathy, these medications may not stand a chance now, but with consistent effort, I plan on introducing this into the market. Local farmers and grocers sell such items that are disregarded. If doctors start prescribing such medication, the need for consistent antibiotics and

vaccines can be taken away. This is a very very far reaching goal. I plan on just introducing alternative medicine and making it common here in the US.

I will use ISM to promote alternative medicine and use it to an extent that will not only help the American population, but will persuade countries all of the world to start using such techniques. With the increase in industrial work and factories, immune systems have been majorly affected and has lowered life expectancies. With such medications that can help the immune system, such diseases can be cured.
